Supplementary Material

Fig. S1 - Micronutrient foliar concentration variations over time (from June 2012 to August 2013) in a planted teak (*Tectona grandis* L.f.) forest in Guanacaste, Costa Rica. Mean and 95% Confidence Interval is shown for each sampling time.
Modifying harvesting time as a tool to reduce nutrient export by timber extraction: a case study in teak (*Tectona grandis* L.f.) planted forests in Costa Rica.

Fig. S2 - Litter nutrient concentration variations over time (from January 2013 to March 2013) in a planted teak (*Tectona grandis* L.f.) forest in Guanacaste, Costa Rica. Mean and 95% Confidence Interval is shown for each sampling time.
Fig. S3 - Micronutrient trunk (wood and bark) concentration variations over time (from June 2012 to August 2013) in a planted teak (*Tectona grandis* L.f.) forest in Guanacaste, Costa Rica. Mean and 95% Confidence Interval is shown for each sampling time.
